

ZAP CA Thin Velocity

PT-07 | 2oz.

PT-08 | 1oz.

PT-09 | 0.5oz.

PT-10 | 0.25oz.

ZAP CA Is the thinnest CA in the ZAP product line. The penetrating or wicking ability of this glue makes it a favorite of modelers around the world

Balsa wood is bonded almost instantaneously, with the glue sometimes traveling several inches into the parts. The consistent performance and strength of the glue is what sets it apart from other brands.

This product is also widely used throughout the hobby industry; the thin formula allows the glue to go where most cannot. Some uses besides hobbies and crafts include; jewelry manufacturing and repair, taxidermy, mold and pattern making, furniture refinishing and antique repair, auto detailing, archery, darts, dental molds and patterns and ceramic repair. Wood turners like the penetrating ability for hardening soft areas and preventing the propagation of cracks.
